

March 2024

**Agrochemicals accepted by the British
Beer and Pub Association and
Campden BRI for use on Cereals**

BBPA TECHNICAL CIRCULAR NO. 485

**Agrochemicals accepted by the BBPA (British Beer and Pub Association) and Campden BRI for use on cereals
for malting and brewing**

The purpose of the BBPA/Campden BRI List

Campden BRI and BBPA aim to test agrochemicals which, because of their chemical nature or timing of application to barley could potentially either affect the malting, brewing or fermentation processes, or cause undesirable off-flavours in the finished beer. In the EU, Commission Regulation (EU) No 284/2013 (Annex, Point 6.4.3 and 6.4.4), and the retained version of this Regulation in the UK, requires quality testing of individual crops and on transformation processes to be undertaken, including taint testing where relevant, meaning an evaluation of the possible adverse effects on transformation processes, such as brewing and malting, or on the quality of their products, is required.

For an agrochemical in a plant protection product (“product”) approved for use on barley to be included on the list of accepted agrochemicals, Campden BRI will carry out an initial assessment of factors, including chemical nature, mode of action, time of application and available test data. Following this initial assessment, Campden BRI will conduct any additional malting or brewing trials necessary to come to a decision. These further trials do not replace or duplicate the toxicological or efficacy testing required by the HSE’s Chemicals Regulation Division (CRD) before the product can be registered but are designed to test the suitability of treated crops for processing specifically within the malting and brewing industry.

Responsibility for approval of agrochemicals in England, Scotland and Wales (GB) lies with the CRD, as do authorisations for products containing those agrochemicals in GB and Northern Ireland (NI). Only those agrochemicals approved by the European Commission may be used in NI. The CRD may therefore authorise products for use in GB only, GB and NI, or NI only, depending on where the agrochemicals are approved. This document is issued in the UK by the BBPA as a Technical Circular and is a comprehensive list of agrochemicals contained in products **registered in GB** for use on barley. Users outside GB will need to check whether listed agrochemicals are approved for use in their own countries. **Agrochemicals are withdrawn from the main list if they are no longer found in products registered for use on barley in GB, even though they do not cause problems in terms of processing. Previously accepted agrochemicals that remain approved in GB but for which there are no registered products for use on barley appear in the annex to the list.**

Please note that kieselguhr (diatomaceous earth) is not present on the list as it is not within the scope of chemicals subject to CRD registration, and its use remains accepted.

Listed agrochemicals are classed as ACCEPTED for use on malting barley for brewing. Agrochemicals accepted for barley are also accepted for wheat for malting and brewing, provided that they are registered for that use by the CRD. Note that a few pesticides registered for use on wheat are not registered for barley; these have not been evaluated for potential effects in malting or brewing and are therefore not included in this list. Product names are now no longer listed in this document, due to the changing nature of products on the market. Full product listings are available on the CRD website: <https://secure.pesticides.gov.uk/pestreg/ProdSearch.asp>

Limitations on timing of application apply for some agrochemicals: where these differ from label instructions or the approval notice there is a note in the limitations column. Details of barley growth stages can be accessed on the AHDB website: <https://ahdb.org.uk/knowledge-library/key-development-phases-and-growth-stages-in-barley>

Maximum Residue Levels (MRLs). A MRL is the maximum concentration of a pesticide residue (expressed as mg/kg), permitted in or on food commodities and animal feeds. The HSE now sets MRLs applicable to GB. MRLs for both GB and the EU (also applicable in NI) appear in the list as well as those that have been set by Codex. MRLs are primarily a check that Good Agricultural Practice is being followed and are intended to assist international trade in produce treated with pesticides. MRLs are **not** safety limits. MRLs are established using toxicological and dietary exposure evidence concerning the safety to humans of the resulting residues and this means that MRLs represent residue levels which are toxicologically acceptable. They are generally well below safety limits, thus exposure to residues in excess of an MRL does not automatically imply a hazard to health.

The list has been extended to the extent that chemicals accepted for barley are also accepted for use on wheat or other cereals for malting and or brewing. However, this should not be taken to imply that there is a current registration for that chemical on that cereal. The MRLs given are for barley.

The EU and GB (active substance) expiry date is the date on which approval for the chemical, on any crop, will be withdrawn unless an extension is granted.

EU expiry dates and MRLs are updated from the EU Pesticides Database at: <https://ec.europa.eu/food/plant/pesticides/eu-pesticides-database/start/screen/active-substances>

UK expiry dates are updated from the GB approvals register which can be downloaded from: <https://www.hse.gov.uk/pesticides/pesticides-registration/active-substances/register.htm>

UK MRLs are updated from the GB MRL register at: <https://secure.pesticides.gov.uk/mrls/search>

The latest expiry date is the latest date on which GB approval for any product for use on barley will expire. Note that some products, may have earlier expiry dates. Some products may be co-formulations with other pesticides. Full details of approved products, together with amendment and withdrawal notices issued since this list was last modified, are available at: <https://secure.pesticides.gov.uk/pestreg/ProdSearch.asp>

Changes made to the list since Feb 2023

Type	Active Ingredient	Changes
Insecticides and fungicides for seed treatment only	Ipconazole	No longer authorised for use in the EU
Insecticides for pre-harvest (field) use	Alpha-cypermethrin	Removed from list as no longer authorised in GB. Proposal to remove authorisation was noted in previous list.
Herbicides	Glyphosate	Desiccant/ pre-harvest use is no longer permitted in the EU

Only additions, withdrawals, and changes of status or limitations are noted here. Changes to expiry dates and MRLs are not included in this table.

Changes to the list since the last date are highlighted in **yellow**. Any proposed or upcoming withdrawals are indicated in *italics*.

Active Substance	Status	Limitations	Expiry (EU) (Active Substance)	Expiry (GB) (Active Substance)	Latest Product expiry (CRD)	Comments	GB MRL (mg/kg)	EU MRL (mg/kg)	Codex MRL (mg/kg)
Insecticides for admixture with grain or in empty grain stores									
Aluminium phosphide	Accepted	Grain storage only	30/11/2026	31/08/2026	29/02/2028		0.05 ¹	0.05	-
Cypermethrin ²	Accepted		31/01/2029	31/10/2028	30/04/2031 (GB only) 30/04/2025 (GB and NI)	Cypermethrin is listed in the EU as a candidate for substitution. It is not listed as a candidate for substitution in GB.	2	2	2
Deltamethrin (with piperonyl butoxide)	Accepted	Grain admixture and empty stores	15/08/2026	31/10/2029	15/02/2029		2	2	2 (deltamethrin) 30 (piperonyl butoxide)
Magnesium phosphide	Accepted	Grain storage only	30/11/2026	31/08/2026	29/02/2028		-	0.05	-
Pirimiphos-methyl	Accepted	Grain admixture	15/06/2025	31/07/2029	31/01/2026		5	5	7
Pirimiphos-methyl	Accepted	Empty stores & transport only	15/06/2025	31/07/2024	15/12/2027		5	5	7

¹ MRL listed under "phosphane and phosphate salts"

² This approval is for cypermethrin only. Alpha-cypermethrin has been removed from the list due to no longer being authorised for use in the UK.

¹Please note the following communication from HSE regarding the use of glyphosate as a desiccant in the UK, dated 20 February 2024:

“The EU decision on glyphosate, as effective from 16 December 2023, does not apply to Great Britain (England, Scotland and Wales) and HSE will carry out a separate evaluation of glyphosate. The EU decision may be used in informing GB active substance/product renewal evaluations. The EU decision automatically applies to Northern Ireland authorisations.

Therefore the current situation is the use of glyphosate as a pre-harvest desiccant is permitted in Great Britain (England, Scotland and Wales), providing the product label lists desiccant as an authorised use.

This situation may evolve as HSE considers implications from the EU renewal of glyphosate, as well as the on-going review (renewal) of GB PPP authorisations.”
